DETAILED ACTION

1. This Action is responsive to the following communication: Pre-Appeal Request for Review, filed 10/20/2008. A telephonic communication was made with the Applicant on January 12, 2009 to confirm the cancellation of claims 22-26 and 29.

2. Claims 1, 3-21, 27-28 and 30-32 are pending. Claims 1, 11, 27 and 28 are independent claims. Claims 22-26 and 29 have been canceled.

Allowable Subject Matter

3. Claims 1, 3-21, 27-28 and 30-32 are allowed.

The following is an examiner's statement of reasons for allowance: Independent claims 1, 11, 27 and 28, when considered as a whole, are allowable over the prior arts of record. Specifically, prior arts of record fail to clearly teach or fairly suggest the combination of following limitations:

- processing data on a specific one node in a network comprising a plurality of nodes configured in a topology in which data, to reach an intended destination node, are transmitted through a configured node-to-node sequence, each of the nodes having a different a node identifier that distinguishes the node from other nodes in the network comprising: i) if the transmission round identifier for the packet does not match a transmission round identifier for an immediately preceding received data packet, changing a first transmit buffer round indicator for a first transit buffer in the specific one node; ii) if the destination identifier for the data packet

does not match the node identifier of the specific one node, storing the data packet in the first transit buffer for later transmission by the specific one node to another node in the first direction, the first data packet being stored with an assigned indicator of the current transit buffer round; and iii) if the destination identifier of the first data packet matches the node identifier, processing the data packet on the specific one node;

- storing data packets originating at the specific one node in a first local buffer of the specific one node for later transmission by the specific one node to another node in the first direction;
- transmitting data packets from the specific one node in the first direction in successive transmission rounds, wherein each successive transmission round there is transmitted i) one or more data packets from the first transit buffer that each have the same assigned transit buffer round identifier, if any data packets are present in the first transit buffer, and ii) one or more data packets from the first local buffer, if any data packets are present in the first local buffer.

The dependent claims further add limitations to the allowable subject matter of the corresponding independent claims; thus, they are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
